DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 5/28/2008 has been entered.

The Information Disclosure Statements

The prior art cited in the information disclosure statements filed on 6/20/2008 has been considered.

Allowable Subject Matter

1. Claims 1, 3-5, 9-17, 20-25, 29 and 30-42 are allowed over the prior art of record.
2. The following is an examiner's statement of reasons for allowance:

As to claim 1, the prior art of record, taken alone or in combination, fails to disclose or render obvious an analyzer or spectrophotometer for the detection of material in a sample comprising: a source of radiation adapted to direct said radiation at least at said sample, the radiation incident on or affected by said sample able to be varied by varying the intensity of the said source radiation; a detector for detecting at least radiation affected by said sample, said detector having a spectral response able to be varied by biasing the detector and an output depending on radiation incident thereon and said spectral response; a controller or processor receiving said output, configured

or programmed to: vary the spectral response of said detector using biasing to produce a sweep of detector spectral responses, each spectral response having a cut off wavelength dependent on the intensity of incident radiation and biasing , in combination with the rest of the limitations of the claim.

Claims 4, 5, 9-17, 20-25 and 29 are allowed by the virtue of dependency on the allowed claim 1.

As to claim 3, the prior art of record, taken alone or in combination, fails to disclose or render obvious a method of detecting material in a sample by using radiation directed at a sample and a detector to detect source radiation affected by the sample, the method comprising the steps of varying the spectral response of said detector using biasing to produce a sweep of detector spectral responses, each spectral response having a cut off wavelength dependent on the intensity of incident radiation; directing radiation at said sample, for each detector spectral response within the sweep of spectral responses, varying the intensity of said radiation incident on or affected by said sample to produce a sweep of source radiation intensities, in combination with the rest of the limitations of the claim.

Claims 30-42 are allowed by the virtue of dependency on the allowed claim 3.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
